

Join the Future of Smart Wearables!

Hey there! Are you an engineering student in Denmark, who dreams about turning an idea into a physical product? If so, you might just be the one we're looking for!

At PRECURE, we're always on the hunt for innovative minds to join us in the exciting world of smart wearables. And now, we've got a unique opportunity for students to participate in the conception and development of our next product - the MLI® Shoulder. This isn't just an internship - it could be your bachelor project!

Imagine designing a wearable device that assesses users' shoulder strain throughout their workday. Not only will you be applying design thinking principles to ideate and iterate on its design, but you'll also delve deep into the causes of shoulder injuries and explore the technology to measure these strains. Sounds thrilling, doesn't it?

You'll be working side by side with our R&D Team, boasting a vibrant mix of hardware, software, and data capabilities. You'll also have the chance to interact closely with our user-centric Customer Success Team and Commercial Team.

Did we mention our office? We're nestled in the dynamic office space of The Camp, based at TRYG Insurance's HQ in Ballerup. Our team is international, diverse, lively, and super flexible when it comes to work hours and locations. Whether you want to work from home, the office, or even your vacation house, we've got you covered!

We believe teamwork makes the dream work, so we're aiming for a project team of 2-4 people.

So, if you're looking to make a real impact while gaining hands-on experience in the fast-paced world of wearable tech, drop us a line. This is your chance to contribute to the future of smart wearables. Let's design the future together!
